

PARTNER EXPERIENCES SURVEY

Has your partner been diagnosed with prostate cancer?

Your experience matters.

Help us understand partners' experiences of intimacy, communication, information and support following a prostate cancer diagnosis in Ireland and Northern Ireland.

Who can take part?

- Adults aged 18 or over.
- Current or former partners of someone diagnosed with prostate cancer in Ireland or Northern Ireland.
- Includes active surveillance and watchful waiting, as well as treatment.

TAKE PART

Scan the QR code to open the survey

- Anonymous and voluntary
- Approximately 10-15 minutes
- Read the participant information before deciding

WHY WE ARE DOING THIS RESEARCH

Understanding life alongside prostate cancer

Prostate cancer can affect more than the person diagnosed. Partners may also experience changes in wellbeing, intimacy, communication and relationships, while their own information and support needs are not always recognised.

What are we trying to understand?

This UCD/IPCOR study aims to understand partners' experiences, identify where information and support may be missing, and help inform better partner-centred services and resources in the future.

What taking part involves

- A voluntary, anonymous online survey.
- Questions about intimacy, sexual wellbeing, communication, information and support.
- No name or contact details are requested.
- You may skip questions or stop before submitting.

What is IPCOR?

Irish Prostate Cancer Outcomes Research collects and analyses information on prostate cancer care and quality of life to help improve outcomes. IPCOR is managed through UCD School of Medicine and funded by Movember.
